David,

On behalf of the community members I support, I ask that the EPA not stall the Superfund process by extending the Public Comment Period. My understanding is that some of the modeling for the Site is incomplete. However, we are all aware of potential flaws with modeling and the inability for us to accurately predict what might possibly occur over the next 700+ years.

Three months is ample time to review the record for the Waste Pits. An extension will not change the science, engineering capabilities, EPA policies and practices, and our laws that back the EPA proposal for full removal.

Thank you,

Jackie Young
